## WILSON PRODUCTION COMMENCED AT 2.5MMCFD

### Kindee ST 949 #1 (Wilson Prospect), Padre Island, Tx, Operator

58.23% WI

Production from the Kindee ST949 # 1 well on Padre Island onshore Gulf of Mexico, USA commenced on 10 September 2007.

This well was spudded on 7 February 2007 (Texas, USA) and formed part of a two well drilling programme undertaken at Padre Island during the year ended 30 June 2007.

Initial production from the field is 2.5 million standard cubic feet of gas per day (mmcf). Performance will be monitored closely over the first few weeks with the aim to reach 3 mmcf.

Internal estimates indicate potential recoverable gas volumes in this lower zone (MT35) likely to be between 8 and 20 BCF based on reasonable reservoir geometric assumptions. An extended period of production should enable this estimate to be narrowed. This will be followed by the drilling of a delineation well. This well should also permit the assessment of potential reserves and productivity of additional pay zones.

The addition of Wilson brings the number of Golden Gate's producing fields on Padre Island to four, increasing Golden Gates share of production to an estimated 3.5 mmcf.

Interests in the Kindee ST949 #1 well:

Golden Gate Petroleum Ltd	58.23% WI
Modena Resources Limited	10.00% WI
Pantheon Resources LP	31.77% WI

On behalf of the  
Board of Directors
