SILVERWOOD PROJECT—GAS SHOW IN PRIMARY TARGET

Drilling Update

The Board of Golden Gate Petroleum Ltd (ASX: GGP) advises that the Richardson #1 Well has reached its targeted depth of 9,500 feet and is preparing to run electric logs. The mud log has recorded a gas show in the primary target interval covering approximately 26 feet which is slightly larger than original projections. The gas show was recorded while drilling with heavier based mud to control the expected high reservoir pressures which were experienced when drilling thru the interval. A full suite of electric logs and side wall cores will be taken over the interval to determine the significance of the reported show.

Project Background

The Silverwood Prospect has the potential to contain 7.4 million barrels of oil and 13.0 billion cubic feet of gas. The prospect is located under an existing field which produced 7.0 billion cubic feet of gas and over 800,000 barrels of oil on a fault closure. Two high quality sands have been identified; the primary target is the Vicksburg Sand (9,300 feet) and the deeper target (Cockfield) around 11,600 feet.

The current plan is to drill a Vicksburg Sand test well adjacent to earlier wells that reached the Vicksburg Sand and flowed oil and gas to surface but mechanically were not prepared for the unique geo pressured environment known to be found in the Vicksburg Sand at Silverwood.

The potential oil resource of the Vicksburg Sand objective is estimated at 2.7 million barrels of oil and 2.7 billion cubic feet of gas. Average cumulative production per well is around 211,000 barrels of oil and 0.2 billion cubic feet of gas. Initial flow rates are estimated to be around the 200+ barrels of oil per day level although the over pressure environment may significantly increase initial flow rates.

The potential oil resource of the Cockfield objective is estimated at 4.7 million barrels of oil and 10.3 billion cubic feet of gas. An initial test well of the deeper Cockfield is planned as a second test well once the operational environment of drilling the Vicksburg Sand is fully understood.

Partners in the Silverwood Project are:

Golden Gate Petroleum (ASX Code: GGP) 30.00% WI
Augustus Minerals Limited (ASX Code: AUJ) 40.00% WI
Pass Petroleum LLC 30.00%
