Market Release (*via electronic lodgement*)

PERMIAN BASIN PROJECT UPDATE TWO WELL DRILLING PROGRAM TO COMMENCE IN SEPTEMBER

Golden Gate Petroleum Ltd (ASX: GGP) is pleased to provide a market update on activities involving the Permian Basin Project and the commencement of a two well drilling program to start late-September which is on plan with our earlier market updates.

Since purchasing the four leaseholds totalling 8,806 gross acres in Reagan and Irion County, Texas; GGP through its wholly owned US subsidiary, Cathie Energy Texas LLC, has been focusing on a development program covering the leasehold where GGP holds all rights to all intervals from the surface thru the Wolfcamp and Strawn. Progress to date includes:

- A rig contract has been executed with Union Drilling Inc. (UDI) to drill two wells starting in September. Rig # 205 has been contracted to drill both wells back to back. UDI is a public company with over 50 rigs in operation, many of which operate in the Permian Basin. UDI has drilled numerous wells on the adjacent acreage surrounding the GGP leasehold with tremendous success, both from a commercial and financial standpoint.
- The lessor, the Texas Scottish Rite Hospital, has given their consent to drill on the leasehold and approval has been given for the two wells to be drilled at the identified locations. All permits are in place and the initial surface location has been built with the second currently under construction.
- A new Drilling Manager has been hired with a successful four year history of drilling Permian wells on the adjacent acreage. Recent drilling programs have been able to drill wells to approximately 8,500 feet in less than 10 days at costs under US\$ 600,000 which is below our original planning estimates. GGP has contracted the UDI rig at rates which are expected to result in these very competitive drilling cost parameters. Halliburton has advised that the first well drilled will be fracture stimulated in mid-October.
- Plans are being put in place for a 10 well drilling program to begin before the end of 2011. New drilling locations are being considered and UDI is reviewing rig scheduling to support the new program. Approximately half the new well locations should be identified shortly with permitting to start.

- Further investigations into the drilling and completion success in our area have identified horizontal wells into the Wolfcamp intervals proving to be some of the most commercial and financially successful wells. Work has commenced on identifying drilling locations where 4,000 to 6,000 feet laterals can be drilled and completed at competitive rates with significantly higher production levels than straight holes. In the GGP leaseholds where not all intervals are available, horizontal drilling appears to be an excellent option to exploit the hydrocarbon riches. Several experts in drilling horizontal wells in the Wolfcamp have expressed interest in assisting our efforts.
- The Company elected not to enter into a formal agreement with Roswell Capital Partners for a AUD 15m Equity Funding facility due to the change in market conditions since signing the Term Sheet. The Company has received a proposed terms sheet with an alternative source of capital for this project and this is under discussion.
