## **DRILLING COMMENCES AT BOW RIVER**

Valdera Resources Ltd confirms that it has commenced its drilling program at the Bow River project in the East Kimberley.

Valdera recently completed an infill ground electromagnetic (EM) survey as a follow up to the heli EM survey previously announced. The ground EM survey has confirmed the presence of strong bedrock conductors and provided greater detail as to their location, structure and dip enabling better drill hole targeting.

The more accurate positioning indicates previous drilling has not tested the main conductors. The previous best intercept, 3.12m @ 1.45% Ni and 0.41% Cu, is immediately adjacent to the highest priority target, a strong EM conductor with coincident magnetic anomaly and associated with the peak soil geochem anomaly.

The Bow River program represents the first of five drilling programs to be undertaken by Valdera over the next 5 months. In the East Kimberley, the Ord Basin copper project is to be drilled immediately after Bow River followed by the Corkwood nickel sulphide project. In the Murchison, the Currans Well nickel sulphide project and the Freddie Well zinc project are to be drilled in or about November this year.

If you have any queries please contact Craig Burton on (08) 9324 1177.
